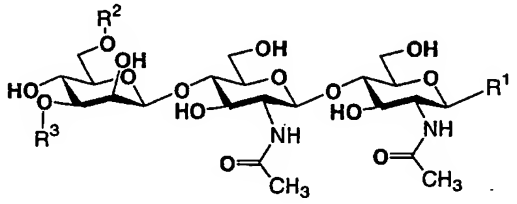
IN THE CLAIMS:

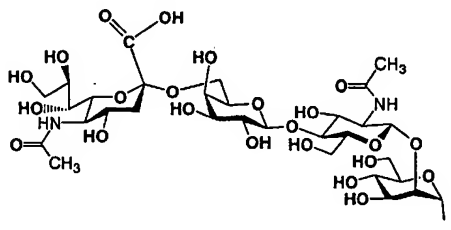
1. (original) An aminated complex-type oligosaccharide derivative.

2. (currently amended) An aminated complex-type oligosaccharide derivative of the formula (1)

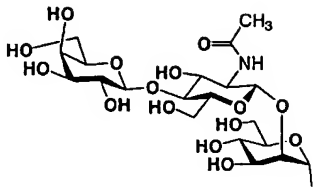


(1)

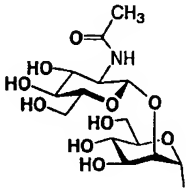
wherein R^1 is H-(CO)-CH_2X, -NH-(CO)-$(CH_2)_b$-CH_2X, ~~isocyanate~~ isothiocyanate group, -NH-$(CO)_a$-$(CH_2)_b$-CO_2H or -NH-$(CO)_a$-$(CH_2)_b$-CHO, X being a halogen atom, a being 0 or 1, b being an integer of 1 to 4, R^2 and R^3 are a hydrogen atom or a group of the formulae (2) to (5) and may be the same or different, except for the case where both R^2 and R^3 are hydrogen or the formula (5), and the case where one of R^2 and R^3 is a hydrogen atom, with the formula (5) serving as the other thereof



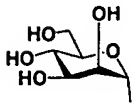
(2)



(3)



(4)



(5)

3. (original) An aminated complex-type oligosaccharide derivative as defined in claim 2 wherein R^1 is a -NH-halogenated acetyl group.

4. (previously presented) A glycopeptide comprising the aminated complex-type oligosaccharide derivative of claim 2 and a thiol group of an amino acid bonded thereto.

5. (previously presented) A process for preparing the glycopeptide of claim 4 characterized by bonding a thiol group of an amino acid to an aminated complex-type oligosaccharide derivative.

6. (original) A glycopeptide as defined in claim 4 wherein the glycopeptide is an antibody.

7. (original) A process for preparing a glycopeptide characterized by cleaving a saccharide of a glycopeptide from an amino acid and subsequently bonding an aminated complex-type oligosaccharide derivative to the resulting peptide.

8. (previously presented) A glycopeptide prepared according to the process of claim 7, the glycopeptide prepared being an antibody.
